## **DETAILED ACTION**

### ***Information Disclosure Statement***

The information disclosure statement (IDS) submitted on 03/30/05 was considered by the examiner.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3 and 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "else by" and "as such", as recited in the claims, respectively, renders the claim indefinite since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Anderson et al (US Patent 3,399,839).

The device of Anderson et al teach the steps of the process of the claimed invention including wetting said caryopses with such a quantity of water as to bring their moisture content to at least 15%, by subjecting them to intense vibration (col. 2, par. 6 and lines 40-44); b) subjecting the wet caryopses to a conditioning step (col. 2, par. 4) ; c) subjecting the conditioned caryopses to decortication operations, consisting essentially of abrasion, to remove the bran (col. 3. lines 31-65) and 10 d) grinding the conditioned and decorticated caryopses (col. 4, par. 3).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson et al in view of Graef (US Patent 5,586,492).

Anderson et al teaches most of the steps of the claimed invention except for subjecting the caryopses to vibrations of a frequency between 50 and 300Hz and the vibrations generated by mechanical, electrical or magnetic energy or ultrasound means. Graef solves this problem by disclosing a similar apparatus including the wetting of the cereals vibrated at approximately 80 Hz via a shaking motor 114 (See Abstract and col. 4, line 65) for purpose of processing the caryopses without a substantial storage time. It would have been obvious to one of ordinary skill in the art to incorporate the step of

subjecting as suggested by Graef in the method of Anderson et al for the reasons set for above.

Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anderson et al.

Anderson et al teaches most of the steps of the claimed invention except for the steps of conditioning steps have duration 4–6 hours and the caryopses are of durum wheat. Anderson et al teaches the conditioning of the product ranges from about 30 minutes up to several hours and the product is from corn meal or corn flour (col. 2, line 65 and col. 1, line 70). It would have been obvious to one of ordinary skill in the art to incorporate the steps, as noted above, in the method of Anderson et al for the purpose of obtaining quick and efficient caryopses products.
